View/edit by private(+implicit public) key.
Note : attacker can potentially see everything (it's OK), but can only edit his results

SERVER

Leaflet

REST API

/interactive_session
(adress, date,etc)

- Create unique session_id
- Fill result table with
  (results,session_id)
- returns session_id

- ask for interactive
geocoding with
(adresse,date,etc.)
- receive unique
session_id "aiElez..65"

GEOCODE

WFST
- show results of
geocoding having
session_id starting with
"aiE"

VIEW RESULT

Geoserver

layer **result_view**

POSTGRES

read

result			
gid	geom	...	session_id
1	Point(..)		Xue87..12
5	Point(..)		aiElez..65

classic view, except
show only beginning
of session_id

result_view			
gid	geom	...	session_id
1	Point(..)		Xue ██
5	Point(..)		aiE ██

trigger : edit only if
-matches on (gid, session_id)
using **full** session_id
 - not too much edit already

WFST
- edit point: send
 (new_geom,...,session_id)
(POINT(..),...,"aiElez..65")
